Yukarıda tanımlanan numune için laboratuvarımızda yapılan muayene ve deneylerden elde edilen sonuçlar müteakip sayfalarda verilmiştir.  
The testing and /or measurement results are given on the following pages which are part of this report.

Deney laboratuvarları olarak faaliyet gösteren TSE Deney ve Kalibrasyon Merkezi Başkanlığı Deney Laboratuvarları TÜRKAK'tan AB-0001-T ile TS EN ISO/IEC 17025:2017 standardına göre akredite edilmiştir.  
TSE Headship of Test and Calibration Center Testing Laboratories accredited by TÜRKAK under registration number AB-0001-T for TS EN ISO/IEC 17025:2017 as test laboratory.

TÜRKAK deney raporlarının tanınırlığı konusunda Avrupa Akreditasyon Birliği (EA) ile Çok Taraflı Anlaşma ve Uluslararası Laboratuvar Akreditasyon Birliği (ILAC) ile karşılıklı tanıma anlaşması imzalamıştır.  
TÜRKAK is a signatory to the European co-operation for Accreditation (EA) Multilateral Agreement (MLA) and to the International Laboratory Accreditation Cooperation (ILAC) Mutual Recognition Arrangement (MRA) for the recognition of test reports.  
Deney ve/veya ölçüm sonuçları, genişletilmiş ölçüm belirsizlikleri (olması halinde) ve deney metodları bu raporun tamamlayıcı kısmı olan takip eden sayfalarda verilmiştir.  
The test and/or measurement results, the uncertainties (if applicable) with confidence probability and test methods are given on the following pages which are part of this report.

<b>Type Of The Sample</b>	ECI Selüloz Elyafı (Cellulose Fiber)

## 1. Introduction

For the test demand of **MEK İNŞAAT SANAYİ VE TİCARET ANONİM ŞİRKETİ** to determine the absorption coefficient of “**ECI Selüloz Elyafı (Cellulose Fiber)**”, tests were performed according to “**TS EN ISO 10534-2:2003 Acoustics - Determination of sound absorption coefficient and impedance in impedances tubes - Part 2: Transfer-function method**” on **24.02.2023** in TSE Construction Materials Fire And Acoustics Laboratory Acoustics Department.

## 2. Test Sample

Test sample was chosen and sent to our laboratory by the client.  
Arrival date of the sample in the laboratory: -/2022

### 2.1 Description Of The Test Sample

**Definition Of The Sample:** ECI Selüloz Elyafı (Cellulose Fiber), Standard texture 25mm thickness, 100kg/m<sup>3</sup> density

**Number Of The Test Samples:** 3 test samples of each in ≈100 mm and ≈28 mm diameters

Diameter(mm)	Thickness (mm)	Mass (gr) ((for the test samples of 100/28)mm diameters)		Density( kg/m <sup>3</sup> )
100 mm	≈25,60	≈16,53	≈1,5	≈100,5
28mm	≈25,43			

\*Client's declaration was taken into consideration in sample definitons.

### 2.2 Mounting Of The Test Sample

The samples were prepared by the customer with diameters of 28mm and 100mm, respectively. Photographs of the sample are given at the end of the report. In the experiment to determine the sound absorption coefficient, the sample is mounted inside the tube with a gasket so that it does not protrude with the front face of the sample holder and does not leak air around it.

## MUAYENE - DENEY SONUÇLARI TEST RESULTS

### TS EN ISO 10534-2:2003

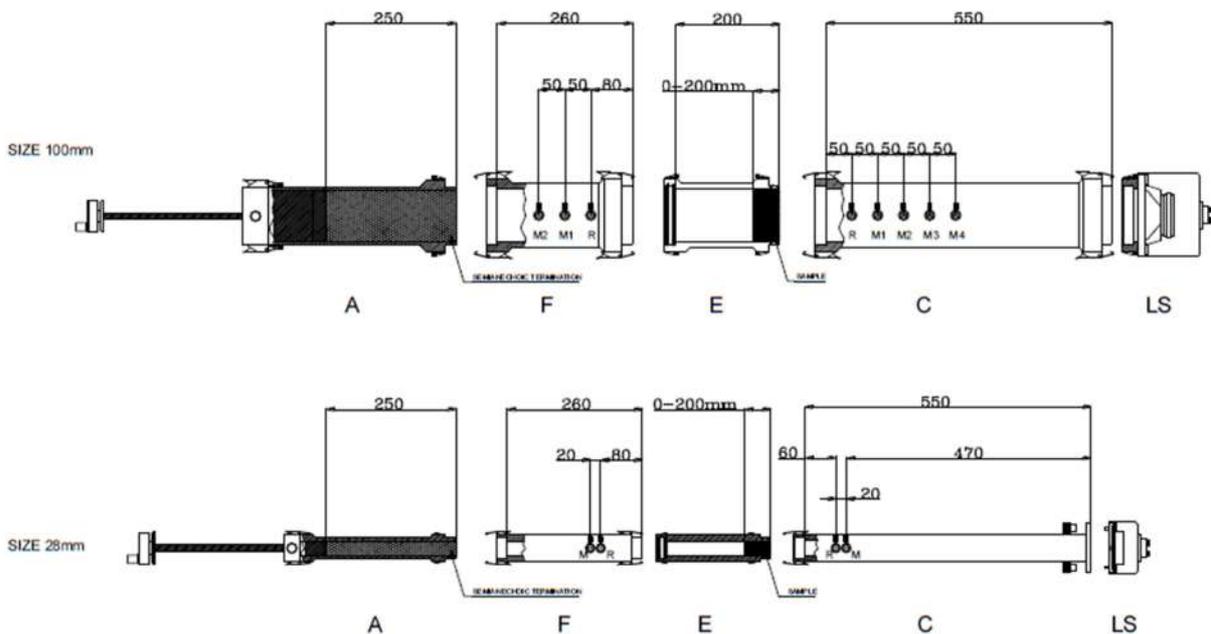

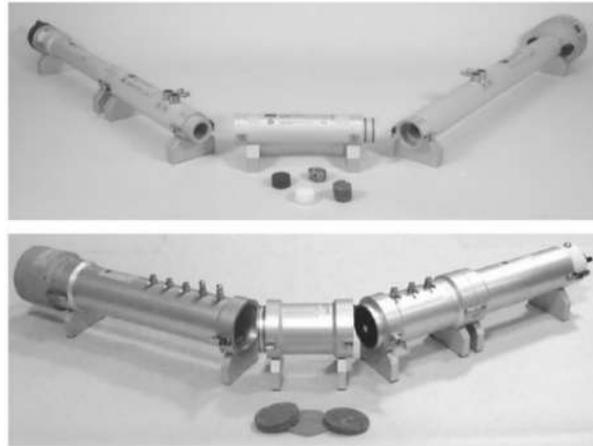

### 3. Environmental Conditions

Temperature [°C]	Relative Humidity [%]	Pressure [kPa]
22,8	43,6	100,2

### 4. Method

The equipment which was used in the test was controlled before the test by performing a test series. Before the measurements, loudspeaker had run for 10 minutes to get a stable temperature. After the pre-test and the measurements, test sample was situated in the tube by sticking to the mounting conditions given above. For both diameters measurements for 3 samples were performed. After ensuring the connection between the signal generator and the impedance tube, signal was created in the related frequency interval for every 1/3 octave band center frequencies and the results were obtained via the proper software.

#### 4.1 Test equipment

## MUAYENE - DENEY SONUÇLARI TEST RESULTS

### TS EN ISO 10534-2:2003

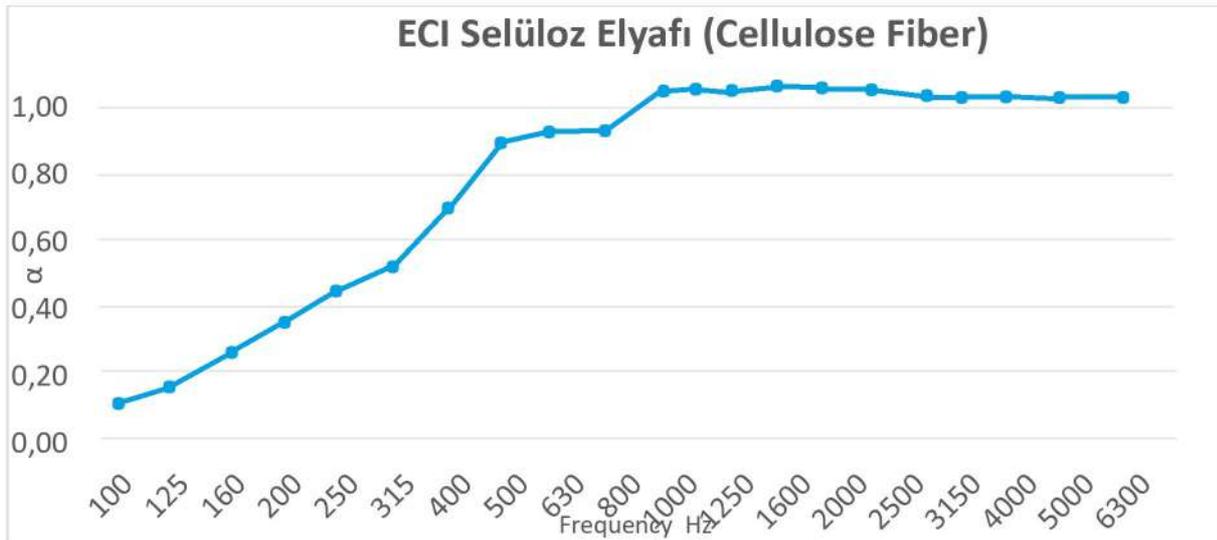

#### 5. Results

The result was obtained by taking the arithmetic average of the measurement results made on the sample. The sound absorption coefficient ( $\alpha$ ) value in the 1/3 frequency band is given in the following pages.

#### Sound absorption coefficient ( $\alpha$ ),

Frequencies Hz	ALPHA			ALPHA AVERAGE.
100	0,13	0,12	0,13	<b>0,12</b>
125	0,20	0,13	0,14	<b>0,16</b>
160	0,29	0,24	0,20	<b>0,24</b>
200	0,34	0,37	0,35	<b>0,36</b>
250	0,49	0,44	0,45	<b>0,46</b>
315	0,57	0,55	0,58	<b>0,57</b>
400	0,71	0,73	0,71	<b>0,71</b>
500	0,93	0,90	0,91	<b>0,92</b>
630	0,93	0,93	0,92	<b>0,93</b>
800	0,95	0,97	0,96	<b>0,96</b>
1000	1,04	1,06	1,05	<b>1,05</b>
1250	1,06	1,05	1,06	<b>1,06</b>
1600	1,05	1,06	1,06	<b>1,06</b>
